Mar Augusthinose College Ramapuram, Kottayam, Kerala

Expertise

- Python
- Django
- Django Rest Framework
- Java
- Linux
- AWS EC2
- HTML,CSS

Language

English

Malayalam

Experience

2020-2021
Foodeato

Founder and Developer

During the time of covid, I started a food delivery startup in my local area. The service consists of a website built with python Django. I worked on both the front and backend of the website and makes users easy to access the website to order food. when my classes started as offline I want to close the service entirely. The startup helps me to learn about real-world applications and their challenges

Projects

Food Ordering website

Online restaurant finding and food ordering website with python Django. I hosted it on AWS EC2. I use Twilio API for SMS notifications. The system has a user-end, admin-end, delivery-driver end, and restaurant-end

Social Media website

A Simple social media website with python Django where users can securely log in and follow other users and post their updates on the system.

Stackoverflow Questions Finder

Websites that enable the user to find questions related to a search term.
I use Redis for the caching system, and pagination and also the throttle system of Django rest API for the project.
