## Experience

### 2020-PRESENT

Foodeato

#### Founder and Developer

During the time of covid, I started a food delivery startup in my local area. The service consists of a website built with Python Django. I worked on both the front and backend of the website and makes users easy to access the website to order food. I hosted it on AWS EC2 and using Cloudflare for DNS. For the Database I use MySQL.

### 2022 SEP-2023 FEB

Enalo Technologies

#### Backend Developer Intern(Django)

During my enriching tenure as a Backend Developer Intern at Enalo Technologies from October 2022, I had the opportunity to immerse myself in the world of cutting-edge technologies. Through hands-on experience, I honed my skills in leveraging Celery, a powerful distributed task queue system. This invaluable experience empowered me to craft efficient, well-structured, and robust code, ensuring enhanced organization, stability, security, and scalability.

### 2023 Mar - PRESENT

Enalo Technologies

#### Junior Software Development Engineer(Full Time)

During my transformative tenure as a Backend Developer Intern at Enalo Technologies from October 2022, I immersed myself in the dynamic realm of cutting-edge technologies. With a keen focus on fostering innovation and driving impactful results, I honed my skills in leveraging Celery, a powerful distributed task queue system. This invaluable experience empowered me to meticulously craft efficient, well-structured, and robust code, thereby amplifying organizational effectiveness and fortifying systems with enhanced organization, stability, security, and scalability.

## Projects

---

### **Food Ordering website**

Online restaurant finding and food ordering website with python Django. I hosted it on AWS EC2. I use Twilio API for SMS notifications. The system has a user-end, admin-end, delivery-driver end, and restaurant-end

### **Social Media website**

A Simple social media website with python Django where users can securely log in and follow other users and post their updates on the system.

### **Stackoverflow Questions Finder**

Websites that enable the user to find questions related to a search term.

I use Redis for the caching system, and pagination and also the throttle system of Django rest API for the project.

## **Weather App in React JS**

A single-page web application using react js for fetching weather details from an API.

## **E-Commerce Application in React JS**

An E-Commerce website with reacts js frontend and Django rest framework backend that helps the user to order things online.
